FMC / WE VoIP Client Release

SAMSUNG

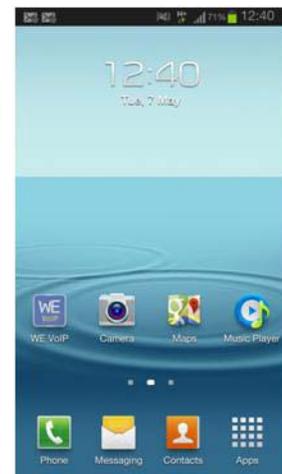

FMC / Wireless Enterprise VoIP Client - WE VoIP

With the recent launch of version 4.70 OfficeServ main software, Samsung is delighted to announce the immediate availability of the FMC/WE VoIP client for the Samsung Galaxy S3 and Note 2 smartphones.

The WE VoIP client allows a user's mobile smartphone to be integrated into the OfficeServ and delivers enterprise level functionality to the SME market place.

Key Features:

- The WE VoIP client is a Samsung developed and supported solution and not a 3rd party SIP client
- The client uses the default dialer from your GS3 or Note 2 device
- Integrated call logs - WE VoIP calls are stored in your generic call log page
- HD voice - where your call is WE VoIP to WE VoIP client, the call can use HD voice to further enhance the call quality and experience
- Integrated contacts - make a call from your contacts list in the normal way, and the call can be routed via the WE VoIP client
- Call recording - WE VoIP has an call record option during a call - recordings are made direct to the handset's storage device/memory
- Transfer to mobile - where necessary, a live WE VoIP call can be transferred to the GSM network at the press of a single button
- Move feature - move a live call from your mobile smart phone to your desk phone at the press of a single button. And vice versa, as call from your desk phone can be moved to your mobile phone
- Call transfer - Transfer calls to other staff members
- Call hold and retrieve
- Bluetooth - Activate your Bluetooth headset during a call
- Mute - Mute your speech
